

# RENEWABLE ENERGY

At some point, fossil fuels will either be gone or cost too much to use

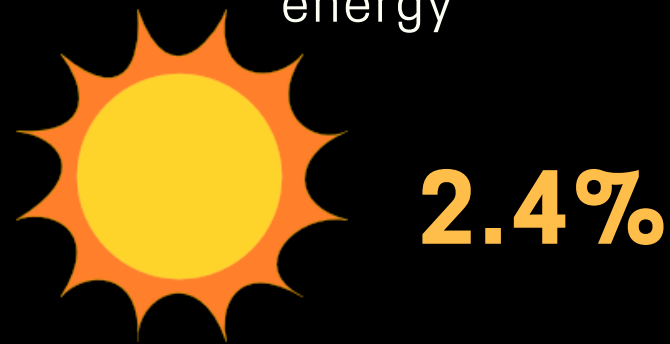

In 2015, renewable energy made 14.6% of Australia's electricity

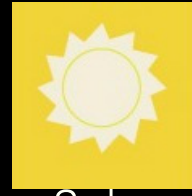

This powered nearly 7 million homes

Solar farms generated the second most renewable energy

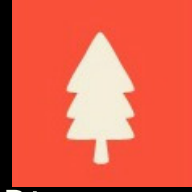

There are six different types of renewable energy

Solar

Wind

Bioenergy

Ocean

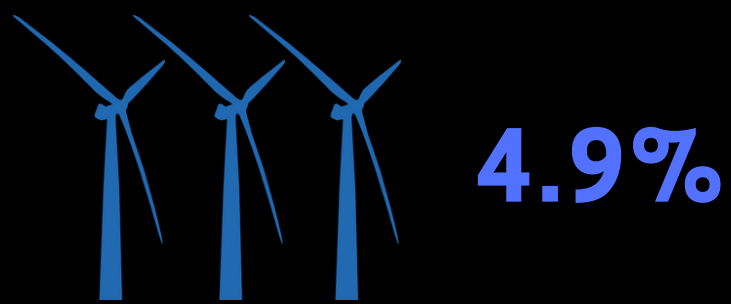

Hyrdopower

Geothermal

Wind farms generated the most renewable energy

Bioenergy generated the third most renewable energy

1.3%

All 3 of the top renewable energy producers can be made on Australian grain farms

Wind and solar generation has increased by

20%

in the last year

Grain farmers can help this

number increase next year
