

The Science - Climate Reality Australia

Climate science

Australian climate science

[CSIRO's climate change resource](#) includes science, impacts, adaptation, regional projections and more.

[State of the Climate](#) (2014) is a biannual Bureau of Meteorology (BoM) & CSIRO report.

BoM also produce an [Annual climate statement](#) (2014).

[The Australian Academy of Sciences](#) supports scientific research and provides independent scientific advice.

[Skeptical Science](#) is a website dedicated to examining global warming skepticism.

[The Climate Council](#) provides independent, authoritative climate change information to the Australian public.

International climate science

[Intergovernmental Panel on Climate Change](#) (IPCC) is the UN body and leading authority on climate change science.

The [World Resources Institute](#) is a global research organisation that works closely with leaders to turn big ideas into action to sustain our natural resources.

The [World Meteorological Organisation](#) is the UN's authority on weather, climate and water.

[Real Climate](#) provides climate science from climate scientists, including great responses to skeptics and topical skeptical arguments.

Carbon budget - resource coming soon.
